WHO WE ARE

We at WS Wieländer+Schill develop and supply professional bodywork tools and workshop equipment, with a strong focus on OEM-approved solutions.

The company employs around 70 people and serves the German market through ten dedicated sales representatives. Although we do not operate international branches, we collaborate with selected partners abroad to ensure professional and reliable market coverage. Our core customers are in the automotive after-sales sector, especially in the area of body repair.

The growing demand for sustainable mobility and alternative drive concepts has driven the development of lightweight vehicle structures made from high-strength steels and aluminum alloys. These complex materials require modern and highly specialized repair solutions. We meet this need with innovative tools and repair concepts specifically designed for multi-material construction. Our continuous development and deep technical expertise make us a trusted partner for workshops adapting to the evolving demands of the mobility transition.
